

GREAT LAKE TAUPŌ

Taupō District Council

\$100 SAVING

TAUPO DISTRICT COUNCIL IS SUBSIDISING THE EARTHMAKER AEROBIC COMPOSTER

ONE VOUCHER PER HOUSEHOLD AVAILABLE NOW!

To be redeemed at **Mitre 10** or **Bunnings** stores

The Taupo District Council is subsidising selected compost bins and worm farms to reduce organic waste in landfills. This is good because:

- **Less organic waste buried in landfills means less methane** – a green-house gas 23x stranger than CO2 that contributes to global warming.
- **Less transport and processing means a smaller carbon footprint** – a green-house gas 23x stranger than CO2 that contributes to global warming.
- **Households add value to their land** – organic 'waste' from kitchens and gardens creates nutritious compost to build healthy gardens.

The **Earthmaker Aerobic Composter** has been selected because:

- **Makes composting easy** – Earthmaker's patented continuous cycle system lets you **add both food and green waste** in the top at anytime, move material through without effort and take compost from the bottom when needed.
- **Gravity does the hard work!** – it's a traditional three-stage process but no heavy lifting or turning is required because the stages are stacked vertically.
- **Reduces greenhouse gas emissions** – its **unique aerobic process** reduces methane emissions and **makes compost faster**.
- **Great size** (466 litre, 75cm dia, 120cm high) – suits households from 2 to 6 – can process **1000kg per year into 300 litres of mulch /compost**.
- **Saves ongoing costs** – on rubbish bags, collection fees, etc.
- **New Zealand invented, designed and made** – and sold around the world.
- **Free delivery to your door** when you use the Yourfastshop order form below.
- **Easy assembly** – your Earthmaker will arrive in a flat pack that will fit in the back of most cars and includes Assembly Instructions and a User Guide.
- **Extra good value** – \$100 is subsidised by the council.
- **The offer is only for one composter per household.**
